SITUATION SUMMARY

Oroville Dam Auxiliary Spillway Incident

On 02/12/17 at 1603 hours the California State Warning Center (CSWC) received notification from the Department of Water Resources (DWR) automated line that the Oroville Dam was in failure status due to extreme scouring of the auxiliary spillway. The CSWC are made notifications according to SOP. All down stream warning points were notified.

Per the DWR Flood Operations Center and California Data Exchange Center (CDEC) as of 02/17/17 at 1800 hours:

- Current releases from Oroville Dam (70,000 cfs) are within the downstream channel capacities in the Feather River.
- Inflows are at 31,000 cfs. substantially less than the outflow releases.
- The lake elevation has dropped below 858.06 feet as result, no water is flowing over the auxiliary emergency spillway.
- The target is to drop the elevation at Lake Oroville to 851 feet by 02/18/17
- The plan to prevent further erosion utilizes trucks, helicopters, and hand crews to move large rocks and gravel to fill holes in the emergency spillway.

Activations

- The Cal OES State Operations Center (SOC) activated at Level 4 in support of the Oroville Dam Incident
- The Department of Water Resources (DWR) Department Operations Center (DOC) has relocated to the SOC
- The DWR Flood Operations Center (FOC)
- Caltrans Headquarters EOC is activated at Level 1

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A strong storm system moving into Central and Southern region is also spreading rain and mountain snow into the region. The heaviest precipitation will be from Plumas and Lake Counties south, with snow levels 6000-7000 feet southeast to south wind gusts to 40-50 mph will also be common over the southern half of the region. Showers will continue on Saturday with snow levels dropping to 4000-5500 feet. A colder system on Sunday will produce scattered snow showers in the northern mountains. Another fairly strong system will move in Monday with moderate to heavy precipitation and gusty southeast -southwest winds. Snow levels will start out above 6000 feet and drop to 4000 feet by late Monday. Another storm system is expected Tuesday night and Wednesday, and colder systems are expected to drop in from the north next Thursday or Friday into the weekend and produce scattered light precipitation with lower snow levels.

SOUTHERN CALIFORNIA

A very strong storm will bring heavy rain through tonight and then scattered showers Saturday morning through Saturday night. Most foothill and mountain locations will receive between 4 and 8 inches of rainfall and most coastal and valley locations will receive between 2 and 4 inches of rainfall with this storm. The snow level will start at around 8,000 feet and then drop to around 6,000 feet tonight and Saturday. Strong southerly winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert areas through tonight, but southerly winds of 15 to 25 mph with gusts to 40 mph will be widespread across the region. A weak ridge of high pressure will bring dry conditions to most of the region Sunday. A second storm will bring rain to the region Sunday evening through Monday night. At this time, it looks as though the foothills and mountain of Central California will receive between 4 and 8 inches of rainfall, while the coastal and valley locations of Central California receive between 1 and 3 inches of rainfall. Most of Southern California will receive less than an inch of rainfall with this second storm. The snow level will start at around 8,000 feet once again and drop to around 6,000 at the end of the storm. A third storm will bring showers Tuesday afternoon through Wednesday afternoon and a fourth storm will bring more precipitation Friday afternoon into next weekend. There will be strong and gusty south to west winds ahead of and with each storm. Temperatures will be near to a little below normal through the end of next week, with 40s to low 50s across the mountains and mid 50s to mid 60s in the valleys.
