WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A storm system has begun to move across Northern California this morning and will continue to do so today into tonight tapering off Saturday. This is a weak to moderate storm system, but most of the impacts will be related to travel over the mountains with Sierra snow. Another storm system will arrive Sunday into Monday, and looks to be a bit weaker than the current storm.

SOUTHERN CALIFORNIA

A deep trough centered off the Pacific Northwest is slowly approaching the area. This system will bring rain and snow to Central California this afternoon before turning south toward Southern California Saturday morning. Most of the precipitation associated with this storm will fall along the central coast and Sierras north of Fresno County. Expect 1-3" of precipitation in these areas with a foot or more of snow above 6,000' from Yosemite N.P. northward. The front will largely dissipate before reaching Southern California with only 0.10 – 0.25" expected near the higher terrain Saturday morning. Temperatures will remain cool today through the weekend with highs in the 40s in the mountains to the upper 60s to low 70s in the valleys. West winds of 20-30 mph will occur each day from the Kern County Mountains to the high desert. Another, weaker, storm will arrive Sunday afternoon, bringing roughly half as much rain. Low pressure will remain cutoff over the Southwestern states early next week which may result in offshore winds and warmer temperatures next Tuesday and Wednesday.
