GOVERNOR'S OFFICE
OF EMERGENCY SERVICES

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A Pacific low pressure system is just offshore, and over the next couple days it will move northeastward to the Washington coast. Multiple waves of precipitation will swing across Northern California with gusty SE-SW surface winds between now and early Saturday. Gusts will reach 40-45 mph in the most wind-prone high elevation areas today, and 25-35 mph elsewhere in open areas. Peak gusts on Friday will be 40-50 mph in many locations. Snow levels will be near 4000 feet in the far north and 6000 feet at the south end of the region. The heaviest precipitation through early Saturday will be over the higher terrain west of the Cascade-Sierra crest, where 3-6 inches of rainfall equivalent is possible. Areas east of the crest will only see light amounts, generally less than an inch. Lower elevations west of the crest will receive 1-3 inches of rainfall in the north and 0.50-1.50 inches in the south. By midday Saturday the precipitation will change over to occasional showers in the mountains and isolated showers in valleys, with more breaks in the clouds. However, another system will move in Sunday night with similar snow levels, and it will continue until early Tuesday, with snow levels dropping to 2500-4000 feet on Monday. In general, Northern California will be in a pattern where a Pacific storm system will move in every 2-3 days through mid February, continuing the wet unsettled and occasionally windy conditions.

SOUTHERN CALIFORNIA

A Pacific storm off the Northern California Coast will bring showers to Central California through Friday night. Most foothill and mountain locations across Central California will receive between 1 and 4 inches of rainfall and most coastal and valley locations will receive between a quarter inch and an inch of rainfall with this storm. Scattered showers will occur across Southern California Friday morning through Friday night with less than a quarter inch of rainfall. South to west winds of 15 to 30 mph with gusts to 50 mph will surface across the mountain ridges and desert passes through Friday night. A weak ridge of high pressure will bring a break in the wet weather Saturday. Another storm will form off the Northern California Coast Sunday bringing showers to Central California starting Sunday afternoon and Monday morning to Southern California. Showers with this second storm will continue through Tuesday evening. Rainfall amounts will be very similar to the first storm. South to west winds of 20 to 40 mph with gusts to 60 mph will surface across the wind prone mountain and desert areas Sunday afternoon through Tuesday night. The snow level with both storms will be between 7,000 and 8,000 feet. Temperatures will be near normal through early next week, with mid 40s to mid 50s across the mountains and upper 50s and 60s in the valleys. Warming and drying will occur next Wednesday as a ridge of high pressure builds into the region from the Pacific.
