SITUATION SUMMARY

Oroville Dam Auxiliary Spillway Incident

On 02/12/17 at 1603 hours the California State Warning Center (CSWC) received notification from the Department of Water Resources (DWR) automated line that the Oroville Dam was in failure status due to extreme scouring of the auxiliary spillway. The CSWC are made notifications according to SOP. All down stream warning points were notified.

Per the DWR Flood Operations Center and California Data Exchange Center (CDEC) as of 02/28/17 at 1800 hours:

- As of 02/27/17 at 1300 hours, the Oroville Dam outflow was stopped from the gated spillway to aid with debris removal in the channel.
- Inflows are at 17,300 cfs.
- The current lake elevation is 841.55 feet. As result, no water is flowing over the auxiliary emergency spillway.
- The plan to prevent further erosion utilizes trucks, helicopters, and hand crews to move large rocks and gravel to fill holes in the emergency spillway.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A cold northerly flow will be over Northern California again today with an associated trough on its way eastward. Cloudiness will linger over the northern and eastern mountain areas in particular, and there will likely be more showers today, although fewer than Monday. Snow levels will remain fairly low, but any accumulations will be minimal. A somewhat wide, relatively flat high pressure ridge will move over the region Wednesday into Friday with dry weather for Northern California. Afternoon highs will be quite seasonable with the warmest areas in the lower and mid 60s. A shift in weather pattern is expected at the end of the week, although the details of events into the weekend remain somewhat uncertain. For now, it appears probable that another cold low pressure trough will arrive Friday night with some precipitation for the NW areas. Moderately strong, gusty southerly winds are likely to develop Saturday night and last into Sunday. Rain and mountain snow are expected to develop and spread across more of Northern California Saturday and last at least through next Monday. Snow levels could drop to as low as about 1200 ft in the NW and 2000 ft in the south for a while Sunday and be probably be a bit higher Monday.

SOUTHERN CALIFORNIA

The back side of a Pacific trough will continue to bring below normal temperatures today, with mid 30s to mid 40s across the mountains and mid 50s to mid 60s in the valleys. A ridge of high pressure will bring significant warming and drying Wednesday through Friday. Temperatures will warm around 10 degrees Wednesday and another 5 degrees Thursday before peaking on Friday with a couple more degrees of warming. Light offshore flow will occur Wednesday through Friday. Temperatures will cool and humidity will increase this weekend as a Pacific trough moves inland across Northern California. This trough may bring scattered showers with light rainfall totals to Central California Sunday. Temperatures will warm early next week as another ridge of high pressure builds into the region from Mexico.
