SITUATION SUMMARY

Oroville Dam Auxiliary Spillway Incident

On 02/12/17 at 1603 hours the California State Warning Center (CSWC) received notification from the Department of Water Resources (DWR) automated line that the Oroville Dam was in failure status due to extreme scouring of the auxiliary spillway. The CSWC are made notifications according to SOP. All down stream warning points were notified.

Per the DWR Flood Operations Center and California Data Exchange Center (CDEC) as of 02/21/17 at 0600 hours:

- Current releases from Oroville Dam (60,000cfs) are within the downstream channel capacities in the Feather River.
- Inflows are at 88,000 cfs.
- The lake elevation has risen to 851.35 feet. As result, no water is flowing over the auxiliary emergency spillway.
- The plan to prevent further erosion utilizes trucks, helicopters, and hand crews to move large rocks and gravel to fill holes in the emergency spillway.

Activations

- The Cal OES State Operations Center (SOC) activated at Level 4 in support of the Oroville Dam Incident.
- The Department of Water Resources (DWR) Department Operations Center (DOC) has relocated to the SOC.
- The DWR Flood Operations Center (FOC)
- PG&E EOC

Key Impacts

Precipitation: Very heavy precipitation is expected today and overnight. Rockslides and mudslides are likely along mountain slopes and steep grades. Snow levels will fall to 5000 feet tonight with 3 feet of snow expected over the Sierra today through Wednesday afternoon. Travel will be exceptionally difficult through mid-week.

Winds: Very strong and gusty winds expected today and overnight. Winds will be capable of downing trees and powerlines, blowing debris, causing widespread and potentially prolonged power outages. Downed trees and powerlines could block roads and make travel difficult.

Flooding: We could see flooding today and Tuesday in areas that haven't yet flooded this winter. The additional precipitation will lead to increased stress on levees, rivers, creeks and streams. Significant additional inflow to reservoirs, streams and mainstream rivers expected through midweek.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A high impact event will be unfolding across the region this Monday morning and will likely persist through the afternoon hours as an atmospheric river takes aim at the region and central California coast. Periods of heavy rainfall are expected, especially along the coastal ranges, along with strong and gusty southerly winds through this evening. These conditions will likely result in widespread flooding, downed trees and power lines resulting in isolated to widespread power outages. Flooding of area creeks, streams and low lying, poorly drained areas can also be expected as well as rises on main- stem rivers. The threat for rock/mud slides, shallow landslides and debris flows in recent burn scar areas will also increase during the next 12 to 24 hours. Rainfall and winds will taper off late tonight into Tuesday. Cool and somewhat drier weather conditions are expected during the second half of the work week. This system will also bring high elevation snow to the southern Sierra Nevada and mountainous areas through Tuesday

SOUTHERN CALIFORNIA

A series of storm systems will bring some rain and cool weather through Wednesday to the region. The highest rainfall totals will be north of Point Conception. The storm system moving across northern and central California will spread some clouds and periods of light precipitation into northern portions of the regions forecast area through Tuesday, otherwise partly cloudy and warmer. Cooler and breezy for Wednesday and Thursday with a dry northwest flow aloft. Warmer on weather is expected Friday, then late Saturday into early Sunday.
