WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

High Risk for scattered afternoon/evening thunderstorms in the northwestern and northern areas today. Isolated afternoon/evening thunderstorms possible near the OR state line Sunday through Thursday. A low pressure trough will remain over the Northern California region through Thursday. Several disturbances moving overhead within the trough will produce at least a slight chance of afternoon showers or thunderstorms near the OR state line each day. The highest chances for thunderstorms will come late today and this evening in northwestern and northern areas as a stronger disturbance passes overhead. Although brief heavy rainfall is likely with any storm, dry strikes are also expected and new ignitions are likely. This pattern poses a High Risk for significant fire development in the Northwest Mountains and Northeastern CA PSAs today. Neighboring areas, primarily the far NE portion of the Mid Coast PSA, the far northern foothills of the Sacramento Valley, and the far northern end of the East Side PSA, also have a slight chance of lightning strikes, but not in sufficient amounts to be considered a High Risk. Tuesday also looks slightly better than the other days for isolated afternoon/evening thunderstorms in far northern areas. The marine layer has become quite deep (around 2500-3000 ft) and morning low cloudiness has pushed well inland into the coastal basins. Cooler temperatures and somewhat stronger than normal sea breeze can be expected over the next few days under the deeper marine layer. In general, temperatures will be near to somewhat below normal, and winds will generally be of local diurnal patterns for the next 5-7 days.

SOUTHERN CALIFORNIA

Breezy in and near the desert during the afternoon and evening hours. A pair of weak troughs will pass through the region over the next few days which will generate cool and breezy conditions. Onshore pressure gradients will tighten, which will result in west afternoon winds of 15-25 mph with gusts to 40 mph in the Kern County Mountains, Antelope Valley, Banning Pass and the east side of the Cleveland National Forest. A deep marine layer will keep the coastal and intermediate valley areas quite humid, but above 3,000 feet and points further inland, minimum RH will fall into the teens for 6-8 hours each afternoon. RH recovery will be good over most areas each night. Expect very little change in temperatures with highs close to seasonal averages through Wednesday. Highs will range from the 70s along the coast, upper 80s to lower 90s in the valleys, upper 90s in the San Joaquin Valley and up to 105 in the low desert. The relatively cool weather will last through the end of next week before a ridge produces warmer weather next weekend. No thunderstorms are expected during the next 7 days
