WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

North Ops remains sandwiched between low pressure near the Pacific NW and strong high pressure over the Desert SW with dry SW flow overhead. The low will drop further south late Wednesday and cool things down somewhat for Thursday and Friday, There will be a very small chance of afternoon and evening mountain thunderstorms in the far NW Thursday. A high pressure ridge will arrive over the West Coast behind the low for the weekend, and our temperatures will rise quite a bit. Some form of a high will be over the region early next week as well. Hot, very dry weather will prevail through the week. Temperatures 8-12 degrees above normal and widespread afternoon min RH 6-16% are expected for the next few days and again over the weekend. Thursday and Friday will be the coolest days this week with the warmest inland areas mostly in the lower 90s. Overnight RH recovery will generally be poor to moderate for the next few days then mostly poor over the weekend with many areas reaching less than 40% then. Light N to NE surface winds at night and westerly afternoon winds will continue through Thursday. Stronger N to NE winds are expected to develop Friday night and continue into Saturday as the high moves into the region, but become lighter during the day. The northerly winds will help keep RH low, especially in those areas favored by that direction. The passing of the low Thursday will generate some moderate S to SW winds for areas east of the Cascade/Sierra crest with afternoon wind speeds reaching 15-25 mph with gusts to 35 mph and low humidity around 12-18%. These conditions should remain just below high risk criteria for North Ops' area.

SOUTHERN CALIFORNIA

Very warm and dry weather continues through this weekend. Gusty northerly winds across the Santa Ynez Mountains starting Thursday night. The high pressure ridge that brought record breaking heat to parts of Southern California during the last couple of days is now starting to weaken. A weak disturbance moving across northern Baja will bring an increase in clouds to the southern portions of the state today, and there may even be a few sprinkles or a brief light shower over the southern mountains this afternoon. Onshore flow will increase which will result in much cooler weather across the coastal and some valley locations south of Point Conception today. It will still be hot with daytime highs in the 90s to near 103 across the inland valleys, 80s to low 90s in the mountains, and near 115 across the lower and eastern deserts. Minimum humidity will be 15-30% over the central portions of the state, but south of Point Conception humidity values will drop into the single digits and teens away from the coast and above 1,500 feet, with poor overnight recovery. Gusty northerly winds across the Santa Ynez Mountains will diminish this morning with much lighter winds expected in that area during the next few days. Elsewhere, sea breezes will help generate southwest to northwest winds of 10 to 18 mph across the coastal and valley areas with speeds up to 30 mph in some of the desert passes. A series of troughs moving into the Pacific Northwest will help weaken the ridge even further Wednesday and Thursday with only minor changes in day to day temperature and humidity expected. Gusty northerly winds are expected to strengthen again across the Santa Ynez Mountains Thursday night into Saturday morning. These winds will be accompanied by low humidity and warm overnight temperatures. High pressure will expand across California over the weekend and into early next week with daytime highs warming by a few degrees each day.
