OF EMERGENCY SERVICES

# WEATHER OF CONCERN

## Weather of Concern

- A dry air mass in place across the area will bring frost to hard freeze conditions in wind sheltered interior valleys of Southwest California.

- **Active Weather Warnings, Watches and Advisories by County:**
- https://alerts-v2.weather.gov/counties/CA

# WEATHER SYNOPSIS BY REGION

**NORTHERN CALIFORNIA**

A few sprinkles or mountain snow flurries are possible in these areas Saturday, but wetting rain is not expected. On Sunday a bit more cloud cover will lead to a slight chance of rain and mountain snow over the northern half of the region in the afternoon and evening. Temperatures will be near to slightly warmer than normal. By early Christmas Day clouds will be clearing out and locally gusty N-NE winds will bring lower relative humidity (RH) to areas from the western Sierra-Cascade slopes to the coastal range. Peak gusts will be 20-30 mph in wind-prone locations. From Tuesday through next Friday mostly dry weather will prevail with warmer than normal temperatures and occasional light N-NE downslope winds.

**SOUTHERN CALIFORNIA**

Temperatures will warm significantly over the weekend, and by Monday, highs will be around 10 degrees above normal. Highs will reach the 50s in the mountains to the 60s across the San Joaquin Valley to near 80 at lower elevations of Southern California by Sunday and Monday. Minimum RH will be in the 10-15 range each afternoon over many areas, but light winds and mostly clear skies should allow for good recovery at night. A light offshore gradient may generate breezy conditions in the wind-prone areas by the middle of next week, but no strong offshore flow is expected the next 7-10 days. No precipitation is expected through the end of the year.
